

Find Speakers for Meetings

You can get ideas for possible speakers from local amateur astronomers such as members of an RASC centre: www.rasc.ca/centres

or from a nearby astronomy club:

<https://www.go-astronomy.com/astronomy-clubs-canada.php>

Many amateur astronomers are able to give talks. Some would be happy to show some astrophotos they have taken. Others have talks prepared on topics such as types of telescopes, the solar system, or black holes. Often talks are prepared for special events such as an upcoming eclipse, bright comet or interesting space mission. You also might find good speakers who work for a space company, or are at a university.

<https://www.asc-csa.gc.ca/eng/audiences.asp> gives information from the Canadian Space Agency on how to arrange a talk – perhaps an astronaut.

Zoom allows busy professionals to more easily talk to a school club.
